SUMMARY

Automation Analyst at Amazon specializing in SQL, ETL pipelines, and Business Intelligence tools (Power BI, Quick Sight), Python, AWS. Expertise in data modelling, KPI definition, automation, and stakeholder driven reporting. Proven track record of delivering actionable insights across e-commerce, pricing analytics with a strong interest in transforming business data into actionable insights.

SKILLS

SQL & Databases: SQL, Amazon Redshift, Joins, CTEs, Window Functions, Subqueries

Visualization & BI: AWS Quick Sight, Power BI, Dashboard Development, Advanced Excel, Power Query

Analytics: KPI Definition, Root Cause Analysis, Data Cleaning, Dashboarding, Stakeholder Management

Programming: Python, Pandas, NumPy, Scikit-learn.

Cloud: AWS(Basics)

EDUCATION

Bachelor of Technology — Mechanical Engineering, S.K.R. Engineering college.

EXPERIENCE

Automation Analyst

Amazon India, Bengaluru | Jan 2023 – Present

- Monitored and analysed competitor sales events, promotional campaigns, and pricing strategies across worldwide e-commerce marketplaces for real-time competitive intelligence.
- Built automated weekly/monthly BI dashboards for leadership reviews (WBR/MBR), tracking KPIs and supporting executive decision-making.
- Collaborated with BI and analytics teams to build real-time dashboards for visibility into competitor pricing trends and market dynamics across global marketplaces.
- Performed data quality checks, anomaly detection, and SQL query optimization on large-scale sales and pricing datasets.

Catalogue Associate— Sales Monitoring & Competitive Intelligence

Amazon India, Bengaluru | Oct 2020 – Sep 2022

- Monitored and analyzed competitor pricing strategies across multiple marketplaces to identify trends and pricing optimization opportunities.
- Conducted end-to-end pricing audits on high-impact products, ensuring alignment with competitive benchmarks and reducing revenue leakage.
- Identified process bottlenecks and proposed automation solutions, driving measurable operational efficiency improvements across pricing workflows.

PROJECTS

Fraud Detection Analytics Pipeline

Designed and deployed deterministic signal-based fraud analytics and BI dashboards to accelerate reimbursement fraud investigation across multiple seller channels. Reduced investigation turnaround time and improved fraud detection accuracy.

Seller Reimbursement Fraud Study for New Sellers

Conducted a comprehensive fraud study targeting new sellers by analysing diverse data attributes — seller profiles, reimbursement values, total sales (GMS), buyer behaviour patterns, and transactional signals — to identify potential fraudulent sellers and buyers, enabling proactive fraud prevention and policy enforcement.

Payment Reconciliation Automation: Automated payment reconciliation by identifying routing mismatches across multiple payment systems. Improved reimbursement accuracy and eliminated 8+ hours of manual weekly effort.
