SUMMARY

Data & Business Analyst with over 5 years of experience in e-commerce operations, pricing intelligence, and workflow automation. Proven track record at Amazon of transforming massive, complex datasets into actionable insights using SQL, AWS Redshift, Power BI, and Quick Sight. Adept at building automated KPI dashboards, optimizing ETL query performance, and translating technical metrics into strategic business recommendations for senior leadership.

SKILLS

SQL & Databases: SQL, Amazon Redshift, Joins, CTEs, Window Functions, Subqueries

Visualization & BI: AWS Quick Sight, Power BI, Dashboard Development, Advanced Excel, Power Query, Power pivot

Analytics: KPI Definition, Root Cause Analysis, Data Cleaning, Dashboarding, Stakeholder Management

Programming: Python, Pandas, NumPy, Matplotlib

Cloud: Amazon S3, AWS Glue, Amazon Athena

Generative AI: Basic knowledge of Generative AI, Amazon Q Business

EDUCATION

Bachelor of Technology — Mechanical Engineering, S.K.R. Engineering college.

EXPERIENCE

Automation Analyst

Amazon India, Bengaluru | Jan 2023 – Present

- Engineered and automated weekly/monthly Business Intelligence (BI) dashboards (WBR/MBR) using AWS QuickSight and Power BI, significantly reducing manual reporting cycles by 40% for executive leadership.
- Executed complex SQL queries (CTEs, Window Functions, Joins) on Amazon Redshift to monitor competitor sales events, enhancing real-time competitive pricing intelligence across global marketplaces.
- Partnered with cross-functional BI teams to develop scalable data pipelines, improving visibility into market trend dynamics and pricing anomalies by 25%.
- Conducted continuous data quality checks and query optimization on large-scale datasets, reducing dashboard latency and maintaining 80% data accuracy.

Catalogue Associate— Sales Monitoring & Competitive Intelligence

Amazon India, Bengaluru | Oct 2020 – Sep 2022

- Monitored and analyzed competitor pricing strategies across multiple marketplaces to identify trends and pricing optimization opportunities.
- Conducted end-to-end pricing audits on high-impact products using SQL and Advanced Excel, ensuring alignment with competitive benchmarks and reducing revenue leakage.
- Identified process bottlenecks and proposed automation solutions, driving 20% improvement in operational efficiency across pricing workflows.

PROJECTS

Fraud Detection Analytics Pipeline

Designed and deployed deterministic signal-based fraud analytics and BI dashboards to accelerate reimbursement fraud investigation across multiple seller channels, reducing investigation turnaround time by 25% and improving fraud detection accuracy by 20%.

Seller Reimbursement Fraud Study for New Sellers

Conducted a comprehensive fraud study targeting new sellers by analysing diverse data attributes — seller profiles, reimbursement values, total sales (GMS), buyer behaviour patterns, and transactional signals — to identify potential fraudulent sellers and buyers, enabling proactive fraud prevention and policy enforcement.
